WORK EXPERIENCE

Full-Stack Software Engineer, Freelance- Mar/2023- present

- **Technologies used:** Express and nodejs (Backend), ReactJs (Frontend), Redux, GraphQL, PostgreSQL, MongoDB (Mongoose).
- I designed and developed websites and web pages for clients using web technologies like HTML, CSS, and JavaScript.
- I integrated third-party APIs like Zapier and Pusher for automating business processes and real-time merchant notification of payment respectively for clients.
- I built a service that computes user profit/loss on sales among other features for clients.
- I built feature API endpoints and collaborated with their frontend team in the integrations of my client's app.
- I fixed existing bugs in the code base and restructured parts of the codebase that could cause the application to break.

Fullstack Software Engineer, Solonet Solutions Limited - Aug/2023 - Dec/2023 - Lagos, Nigeria

(Contract - Remote).

Project: *Commap app - an app for real estate management, it offers real estate owners the opportunity to manage their estates from their own comfort zones.*

- **Technologies used:** Ruby on Rails (Backend), ReactJs, ChakraUI (Frontend), and PostgreSQL database.
- I built reusable components for parts of the frontend application using ReactJs and ChakraUI.
- I wrote unit tests for all the features implemented.

→ I fixed existing bugs in the code base and restructured parts of the codebase to work independently using ChakraUI and Reactjs

EDUCATION AND CERTIFICATES

Diploma in Software Engineering (Backend), AltSchool Africa	2024
JavaScript data structure and algorithm certification, Freecodecamp.org	2023
B.Eng. in Agricultural/Environmental Engineering, Federal University of Makurdi, Benue.	2017
